

The *research* area of the site is concerned with research I am involved in. I have interests in **areas of technology uptake in academic scenarios**, as well as **researching future ways of multiple digital content use and sharing**, and the **monetization of user generated authentic content in social web**.

See below for projects and proposals:

1. MA Learning and Teaching in Higher Education Dissertation

The research project is entitled “***An exploration of key factors influencing (promoting or hindering) current & future use of technologies in Learning and Teaching, with relevance to metropolitan universities***”. The complete submitted artefact (actual assessed work) is all available online, click the link below.

>> [MA Research Dissertation](#)

2. Future draft research project proposals

Proposals are in development for:

- **Multi-use content in Academic Communities** - establishing ways forward to enhance student experience and academic staff engagement in mutually shared content environments
- **Monetise your mind**: a conceptual analysis of methods for developing commercial income generation models benefitting both users and the brands they care about
- **Smart Training - using technology profiling** to personalise staff development initiatives in universities
